SRT306

A personal alarm is meant to save lives and must be able to perform at all times. That is why SRT306, with its superior battery lifetime and high quality, is the most popular personal alarm in Sweden.

Alarm

When the alarm button is pressed an alarm message is sent to the emergency service center of your choice. The operator receives information about your identity along with your position. Simultaneously a voice call is set up with the operator. Depending on the scenario the emergency service center operator takes action to ensure proper aid is provided. Besides the push button alarm SRT306 offers a wide range of other alarm possibilities.

Man Down

If SRT306 detects a lying position for a sustained period of time, an alarm is sent automatically.

Timer alarm

The unit can be set to automatically send an alarm after a certain time period should the user be unconscious or rendered unable to send an alarm herself.

Call Button

In addition to the alarm button the unit is equipped with a Call Button. When pushed the unit places a voice call to a preset number. The call button offers an alternative in situations of less than utmost emergency.

Battery lifetime

Running at maximal level the battery lifetime reaches up to 48 hours. When battery power is running low the unit emits a warning and the current power level is always visible on the device with the help of a status LED.

Report types

The SRT306 supports various international reporting standards including SRT#, OVLS and MPTP. SRT306 has been tried and tested with all of the larger emergency service centers.

CE approved

SRT306 is tested in an accredited test lab for compatibility with European standards for EMC, electrical safety, spurious RF emission, SAR, free fall and enclosure water and dust protection.

- Developed in Sweden
- Speaker and microphone
- Accelerometer for vibration and motion detection
- Quadband GSM/GPRS
- GPS/GLONASS/Galileo receiver
- Supports GeoFencing
- Intelligent power saving mode
- Sends low battery alarm
- eSIM (Chip SIM) version available
- Status LEDs
- USB charging
- Water and dust proof (IP54)
- Small and handy size: 90x46x21,5 mm
- Weight: 104g

Accessories

Wall charger 230V, desktop charger, car charger 12V, USB cable, case, charger case and lanyard.
