SRT326

SRT326 is a personal alarm intended for use at fixed locations, such as shops or health care facilities. Are you an employer wanting to give your employees that extra security? Or do you feel the need to be able to easily and quickly call for help in case of an emergency? Then SRT326 is the alarm device for you.

Alarm

When the alarm button is pressed an alarm message is sent to the emergency service center of your choice. The operator receives information about your identity along with your position. Simultaneously a voice call is set up with the operator. Depending on the scenario the emergency service center operator takes action to ensure proper aid is provided. Besides the push button alarm SRT326 offers a wide range of other alarm possibilities.

Man Down

If SRT326 detects a lying position, an alarm is sent automatically after a predetermined time period.

Timer alarm

SRT326 can be set to automatically send an alarm after a certain time period should the user be unconscious or rendered unable to send an alarm herself.

Report types

The SRT326 supports various international reporting standards including SRT#, OVLS and MPTP. SRT326 is fully integrated with all of the larger emergency service centers.

Call button

In addition to the alarm button the unit is equipped with a call button. When pushed the unit places a voice call to a preset number. The call button offers an alternative in situations of less than utmost emergency.

Battery

Running at maximum level the battery lifetime is up to 4 days. When battery power is running low the unit warns the user and the current power level can always be read on the front of the device through the status LEDs.
