SRT278

Keep track of your vehicle with SRT278 - A compact GSM/GPRS unit designed for permanent vehicle installation and with built in GNSS receiver (GPS, GLONASS etc.).

Introduction

SRT278 is a compact yet versatile tracking device for vehicle installation. On board GNSS receiver and GSM/GPRS communication capabilities enable constant monitoring of your vehicle. And with three I/O connectors you can adapt SRT278 to your needs. SRT278 can be powered either from the car battery or a separate battery.

Alarm

Connect an alarm button to the SRT278 and mount the button on the car dashboard. When the alarm button is pressed the device sends your geographical position to a preconfigured emergency service center along with information detailing the alarm type.

Map tracking service

SRT278 can be configured to continuously report its position through GPRS. Used in combination with an online map tracking service it is possible to follow the unit in real time on an online map interface. You can also choose to see historic positions and get a view of where and when the unit started, stopped or sent an alarm.

Driver's log

The SRT278 can be connected to a button which enables the driver to choose whether the distance to drive is for private or professional purposes. This enables you to create detailed driver's logs accounting for private and professional driving separately.

Installation

SRT recommends vehicle installation of the SRT278 is performed by an authorized mechanic. Please contact us for recommendations and bookings.

- Developed in Sweden
- Speaker and microphone
- Quadband GSM/GPRS
- GPS/GLONASS/Galileo
- Geofencing
- Speed restriction warnings
- Cost efficient communication protocol
- Connects to car burglar alarm
- Connects to breath alcohol ignition interlock device
- Tough aluminium casing
- Powered with 12-36 VDC
- Size: 100x59x24 mm
- Weight: 158g

Accessories
