SRT330i2

SRT330i2 is an alarm receiver supporting GSM and RF communication that quickly and effectively indicates that an alarm has been triggered.

Alarms

SRT330i2 is an alarm receiver that can be used together with all SRT alarm products. When SRT330i2 receives an alarm it is indicated through a sharp sound and a flashing warning light. Depending on the configuration SRT330i2 can also forward alarms by GSM, GPRS and RF.

RF communication

SRT330i2 is, just like the other products in SRT's i-series, RF communication enabled. This means it is well suited for use in environments with little or no GSM coverage.

Display

When an alarm is received, the display shows the sender's number or associated ID. The associated ID is an optional string of text that can symbolize for example a name, vehicle or place.

Emergency service center

All of SRT's alarm products can be programmed to send alerts to multiple recipients which means SRT330i2 can be used in parallel with an emergency service center. Alarms received by SRT330i2 can also be relayed to any receiver of your choice.

Heartbeat

SRT330i2 can send heartbeat messages to a preprogrammed receiver. It can also be programmed to handle heartbeat messages from other parts of an indoor positioning system. That way it is possible to create an autonomous yet secure system that makes sure all its different parts function properly.

Alarm relaying

SRT330i2 can forward alarms through GSM, GPRS and RF to hundreds of recipients. Multiple SRT330i2s can be used to implement alarm reception in environments completely lacking GSM coverage.

Different alarm types

SRT330i2 can be made to generate various alarm types. For example peripheral electrical equipment can be connected to SRT330i2's signal input and upon loss of voltage an alarm will be generated. Additional alarm types include shut down, loss of power and low battery alarms.

- Developed in Sweden
- Alarm reception through GSM and RF
- Alarm forwarding through GSM, GPRS and RF
- Warning light
- Alarm siren
- Reset/Test function
- Alarm button
- Large display
- Internal battery 6 Ah
- Size 193x123x80 mm
- Weight: 472g
- Supports various alarm protocols

Included accessories

Wall charger, desktop software for configuration.

Optional accessories

External siren 20W.
